

SIGRIST-PHOTOMETER exhibited in the new booth at the BrauBeviale 2008 in Nuremberg. Many existing and new contacts got updates on products for turbidity, colour and phase switching.

All products – e.g. the ColorPlus with the new calibration unit or the RAMS for phase switching monitoring – received high interest from the visitors of which many come to the show from abroad. Of course some of the guests enjoyed one of the fine beers served at the booth, discussed the 40 years anniversary of SIGRIST in Germany, the new team or the latest trends in the market.

Good-bye until the Drinktec 2009 in Munich!
