

BactoSense TCC – aqua pro Innovation Award 2018

The trade fair aqua pro gaz takes place every two years and is the only trade fair in Switzerland for experts from the water, gas and sewage industry. This year, 115 exhibitors from all of Switzerland present themselves on three days. In the course of the event, specialist lectures are presented covering current topics. The trade fair is open from Wednesday, 7th to Friday, 9th February 2018, 9.00 to 17.00 o'clock in Espace Gruyère, Bulle (FR).

The jury of the Innovation Award headed by Phillippe Perritaz, president of the trade fair aqua pro gaz, decided on the Innovation Award 2018 and the Jury Award 2018. Thirteen candidates fulfilled the strict criteria: a real innovation in the technical, industrial and business sense; real added value for the users and operators; launch on the Swiss market at least one month before the trade fair is opened.

Innovation Award 2018 - SIGRIST-PHOTOMETER AG for the product BactoSense TCC

The BactoSense TCC is an automatic flow cytometer for the microbiological monitoring of drinking water. This automatic flow cytometer has been specially developed to meet the needs of the water industry for the microbiological monitoring of drinking water. The entire program is carried out quickly and is fully automated. The measuring results are available after just 20 minutes (with customary methods, this takes 72 hours).
